***Election/Restrictions***

1. Applicant's election of group I (ie. claims 5-7) in the reply filed on January 18, 2005 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)).

***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 5-7 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Kambe et al (US 6323439).

Kambe teaches a multilayer wiring board comprised of an insulating core layer (21,22), via holes (H1,H2,H5,H6), surface wiring layers (32,51) and additional insulating layers (41,42) (Fig. 1).

Via holes (H1,H2) are formed in the thickness direction of the insulating core layer. The via holes are plated with copper (36) (col 7 L 53-54). The via holes have diameters of 50  $\mu\text{m}$  (or less than 200  $\mu\text{m}$ ) (col 7 L 50-51 & col 8 L 22-24).

Wiring layers are formed on both surfaces of the insulating core layer and on the via holes (col 5 L 5-10). A resinous filler (or plug) is filled into the plated via holes (col 10 L 23-24). An additional insulating layer (41,42) having conductive via holes are

formed over the insulating core layer and in electrical connection with the wiring layers of the insulating core layer.

Kambe clearly teaches the structure of the present invention.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Particularly USPN 6,810,583, USPN 6,847,527, USPN 6,790,305 and USPN 6,645,607.
